LDPE ALCUDIA® 2335FG

DESCRIPTION

ALCUDIA® 2335FG is a low density polyethylene grade, produced by high pressure autoclave technology, suitable for thin blown film or cast film applications. This material offers easy processability and good balance of mechanical and optical properties. It contains high concentration of slip (erucamide), antioxidant and antiblock additives.

TYPICAL APPLICATIONS

- Pouches with good slip and optical properties.
- Automatic packaging
- Thin shring films
- Bags for the textile industry

Recommended melt temperature range from 140 to 165ºC. Processing conditions should be optimised for each production line.

ALCUDIA® 2335FG complies with the European Directives regarding materials intended for contact with foodstuffs. For further information, please contact our Technical Service and Development Laboratory or our Customer Care Service.

STORAGE

ALCUDIA® 2335FG should be stored in a dry atmosphere, on a paved, drained and not flooded area, at temperatures under 60ºC and protected from UV radiation. Storage under inappropriate conditions could initiate degradation processes which may have a negative influence on the processability and the properties of the transformed product.
